FOR IMMEDIATE RELEASE

Crosslink Complements ISO with Lean and 6S

January 6, 2009 – Crosslink International Inc., manufacturer of rubber and rubber to metal applications for the automotive, industrial, and specialty markets has taken a companywide measure to implement two supporting quality systems, Lean and 6S. The complementing quality systems will be rolled out over the next 12 months and will support the current ISO 9001:2000 system for design and manufacturing of rubber and rubber to metal products.

This shift to Lean and 6S enables Crosslink to provide the best quality products to their customers. In addition, we estimate the Lean and 6S principals will assist our ISO system by instilling a more organized road map. By implementing Lean and 6S, we will be able to gain additional control over inventory, and make better use of floor space, workspace, and daily practices.

Crosslink International, Inc is a World-Class Elastomers Company serving the Automotive, Industrial and Specialty OEM markets. Our core competencies revolve around the Design and Development of complex rubber, and rubber to metal applications. Crosslink is dedicated to being the leading provider of high-quality, custom elastomer products to the Americas, European and Asian markets.
