FOR IMMEDIATE RELEASE

Crosslink International Server Upgrade & Enhancements

June 10, 2015 – Crosslink International Inc., manufacturer of rubber and rubber to metal applications for the automotive, industrial, and specialty markets recently took on a major IT project to replace our Server, upgrading from 32 bit to 64 bit at our World Headquarters.

The project is well underway and we have purchased two Dell Poweredge R710 rack mounted servers. Two 64 Bit Intel Xeon Processors and 64 GB RAM have been installed in each Server. This will allow for much greater speed and will help us conform to 64 bit programs. Upgrade to Server Operating System will allow us to continue to receive Operating System Support and Updates. File Migration has begun and we are continually improving our operations to help streamline all of our computer processing functions across all departments to continually help us evolve to all customer demands.

Crosslink International, Inc is a World-Class Elastomers Company serving the Automotive, Industrial and Specialty OEM markets. Our core competencies revolve around the Design and Development of complex rubber, and rubber to metal applications. Crosslink is dedicated to being the leading provider of high-quality, custom elastomer products to the Americas, European and Asian markets.
