FOR IMMEDIATE RELEASE

Crosslink Local LTL Transportation In-House

October 19, 2007 – Crosslink International Inc., manufacturer of rubber and rubber to metal applications for the automotive, industrial, and specialty markets has officially brought their LTL (less than load) local transportation routes in house. All routes within 350 miles will be handled by Crosslink Transportation.

The effort to integrate the transportation is a result of the rising surcharges and estimated continuation of fuel process and materials costs over the next several years. Crosslink expects to eventually be able to pass these efficiencies on to its customers.

Crosslink International, Inc is a World-Class Elastomers Company serving the Automotive, Industrial and Specialty OEM markets. Our core competencies revolve around the Design and Development of complex rubber, and rubber to metal applications. Crosslink is dedicated to being the leading provider of high-quality, custom elastomer products to the Americas, European and Asian markets.
